PROFILE

Computer Science MSc student (completing 2027) with research experience in deep learning for MRI denoising and segmentation, and a background in software development with Python, Java and TypeScript. Over several years of teaching databases, SQL and data pipelines to engineering students, I have learned to explain technical ideas clearly to non-specialists. Seeking a graduate role in Software Development and AI where I can combine technical skills with strong communication.

EDUCATION

MSc Computer Science University of Bath	2024 – 2027 (expected)
BA Fine Art Newcastle University	2010 – 2014

PROJECTS

Deulaubaba React Native, Spring Boot, PostgreSQL Led development of a mobile application that lets educators and parents share data on students with severe and multiple disabilities and collaborate on teaching aims.
MRI Denoising Research Python, PyTorch Research judging how well self-supervised denoising models perform on downstream tasks such as tumour segmentation, identifying the pitfalls and benefits of different denoising approaches.
Chat Simulation Game TypeScript, Svelte - Lead developer of a simulation game, designed by researchers at Ewha University, that helps students with learning disabilities recognise attempts at online grooming. - Presented as a poster at the Korean Digital Contents Society Summer Conference (2025).

WORK EXPERIENCE

Lecturer, Department of Electronics Bucheon University	Mar 2021 – Present
- Lead a number of classes including 'Data Skills for Engineers', 'English for Engineers' and others. - Maintained online learning environments for students to use distance learning resources. - Taught students to effectively use databases, SQL queries, and data pipelines in Python and Bash.	
Online Lecturer, English Language Korea Cyber University	Sep 2019 – Present
- Produced written, audio and video resources to teach effective English communication. - Managed students' online grades and delivered personalised feedback and learning aims.	

ACHIEVEMENTS

KSAAC Excellence Award Korean Society of Augmentative and Alternative Communication Awarded for developing an emoticon set targeting youths with communication disabilities.	2020
---	------

SKILLS

Computer Science	ML and AI, Deep Learning, Computer Vision, PyTorch, Data Pipelines
Programming	TypeScript, JavaScript, Java, Python, SQL (PostgreSQL)
Frameworks	Spring Boot, React, React Native, Svelte
Design	Figma, Adobe, Blender
Tools	Git, Bash, Linux, Node.js, Docker, Jest, Jupyter Notebook
Languages	English (Native), Korean (Fluent)
